

Container Apps CI/CD Workflow Using GitHub Actions

Prerequisites

1. GitHub Account
-

Click [GitHub](#) for Container Apps CI/CD Code.

Steps:

1. Create a github repository.
 2. Add your project files and folders in the repository.
 3. Create `.github` folder in project directory.
 4. Inside it, create `/workflows` directory.
 5. Create `container-apps-ci-cd.yml` file and store it in above-created `.github/workflows` directory.
 6. Define the **name** and following map of **env variables**:
 - ACR_LOGIN_SERVER
 - ACR_NAMESPACE
 - ACR_REPOSITORY_NAME
 - ACR_IMAGE_TAG
 - RESOURCE_GROUP_NAME
 - CONTAINER_APP_ENVIRONMENT_NAME
 - CONTAINER_APP_NAME
 7. Define the **on** to set which events can cause the workflow to run.
 8. Define the following **actions** for build & push i.e **Continuous Integration (CI)**:
 - Checkout the repo
 - actions/checkout@v4
 - Login to ACR
 - azure/docker-login@v2
 - Build and push the image
 - docker/build-push-action@v5
 9. Define the following **actions** to deploy the container i.e **Continuous Deployment (CD)**:
 - Azure login
 - azure/login@v2
 - Deploy Container Apps
 - azure/container-apps-deploy-action@v1
-
